RESTORE LIFE

We make orthopedic implants SMART

SAFE REHABILITATION **AT HOME**

from External Traction ...

1950s

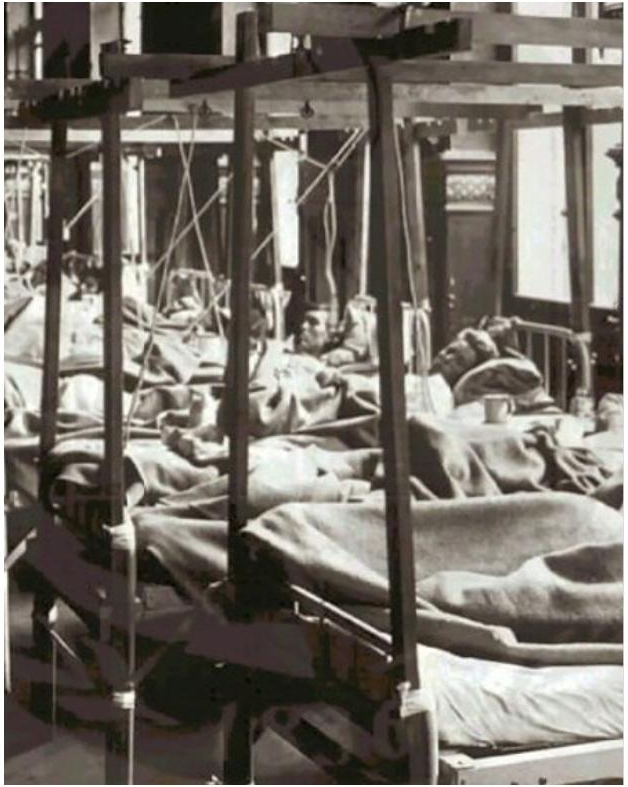
... to Internal Fixation

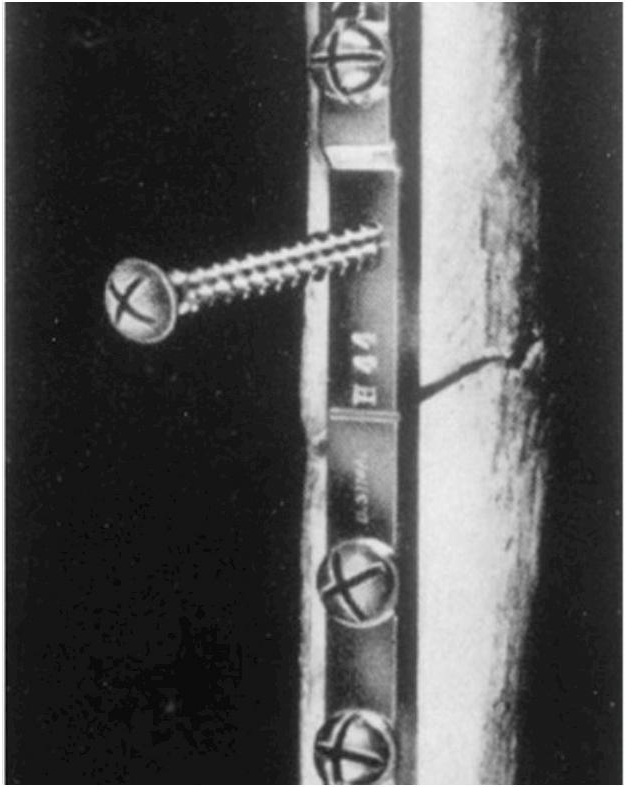
Surgical Revolution

2027

... to SMART Implants

Rehab Revolution





Hip Fracture

14M cases per year worldwide today - 26M in 2050 due to demographic aging

Care Intense Patients

Frequent monitoring required

Healthcare overloaded

Critical Monitoring Gap

Surgeons are 'flying blind'

Low patient compliance

High complication Rate

35% Re-Admissions

25% Death

Real-time Recovery Data from the Fracture Site

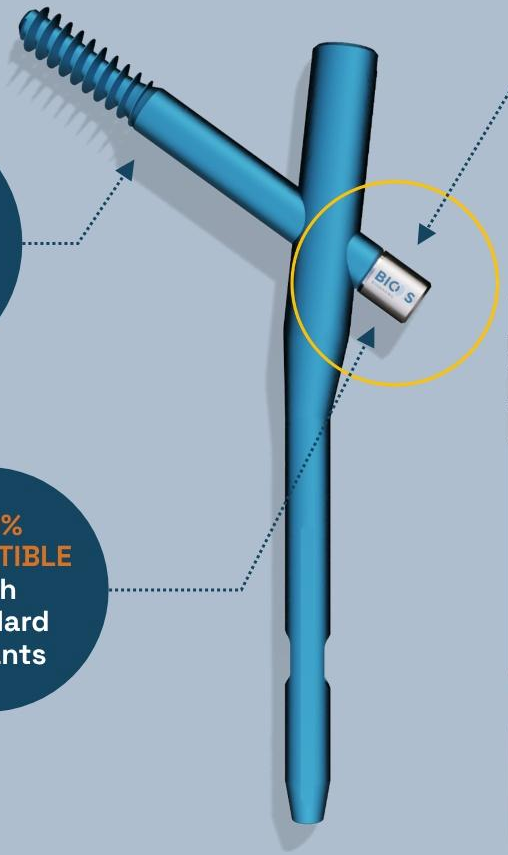
Healthcare Professionals can react early to potential complications

Patients gain peace-of-mind

Hospitals save cost and free up resources

The world's first hip fracture recovery sensor

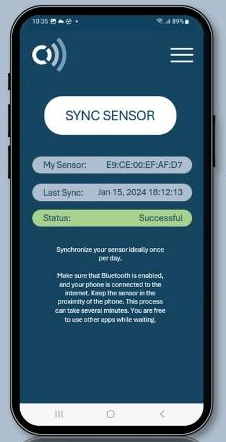
Patented Tech



Healing progress data directly from INSIDE THE FRACTURE

100% COMPATIBLE with standard implants

NO change in surgery technique



PATIENT CONVENIENCE

'Implant and forget' rehab monitoring

Empower the Doctor

TAKE INFORMED DECISIONS AND ACT IMMEDIATELY

Empower the Patient

TRACK PROGRESS IN REALTIME AND ADAPT

Revenue Model

Recurring revenue through **device sales** and **data subscriptions**

Revenue per patient

Implanted sensor $1,400

Data Subscription $300

Average size hospital

85 sensorized hip fracture cases

$145k

ARR per hospital

Hip fracture only

Commercial Considerations

Value-based reimbursement

Why (us) now

US Hospitals as of 2026

- One Bundle-Payment
- Surgery + Rehabilitation

Patient Sensorization enables

- Reduction In-Patient Length of Stay (IRF & SNF)
- Rehab Cost Reduction
- Fewer ER visits
- Fewer Re-Admissions

+$800k
Annual profit

Precedence case - Ortho Smart Implant

ER visits

- 48% less

Re-Admissions

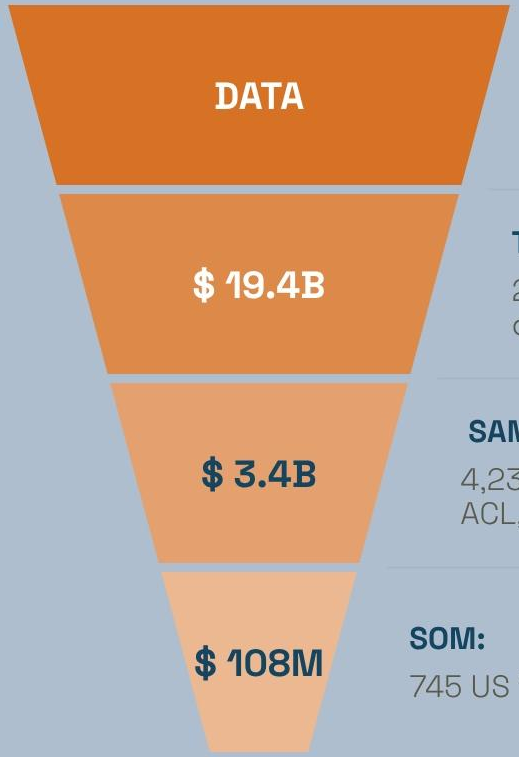
- 51% less

Cost Savings / Patient

- $14'047
- 50% less

Hanby et al. 2026

Market



Health insights based on empiric data

OEMs, payers / insurances, pharma

TAM:

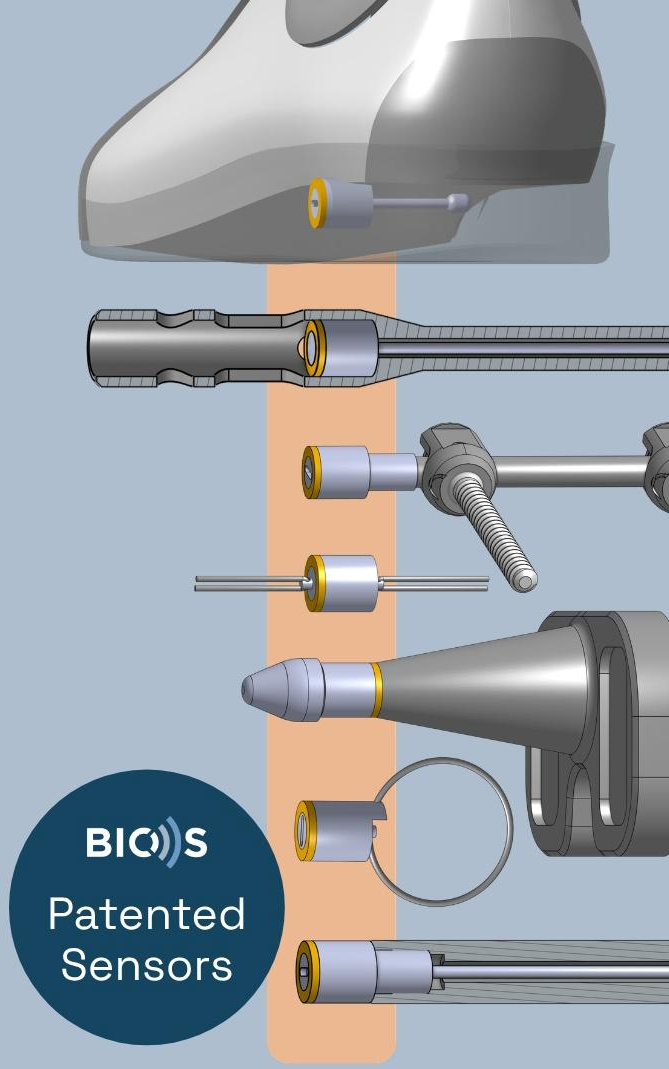
26.5M joint replacement & trauma fixation cases worldwide

SAM:

4,235 US hospitals, 6 indications - hip, spine, ACL, knee, sternotomy, nail conditions

SOM:

745 US "TEAM" hospitals, **hip fracture only**



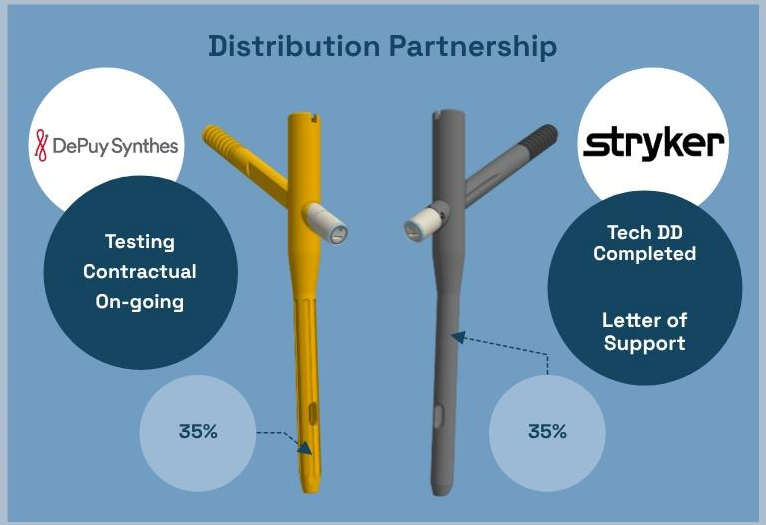
What we've achieved in the first 3 years

IP / Tech / Supply Chain

Expedited & De-Risked Path to FDA Clearance

Clinical Trial & Technology Acceptance Testing

Distribution Partnership



Start-up innovation project supported by

Schweizerische Eidgenossenschaft
Confédération suisse
Confederazione Svizzera
Confederaziun svizra

Swiss Confederation

Innosuisse – Swiss Innovation Agency

Competitive Landscape

Continuous and long-term healing data from **where it counts** made **convenient**.

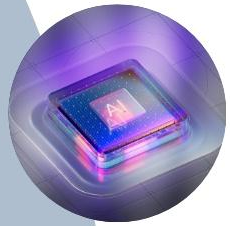
Market Implementation Roadmap



2026
Design freeze

Device Validation

2027
First in Human

2028
US Market Entry

AI-Recovery Monitor Pilot

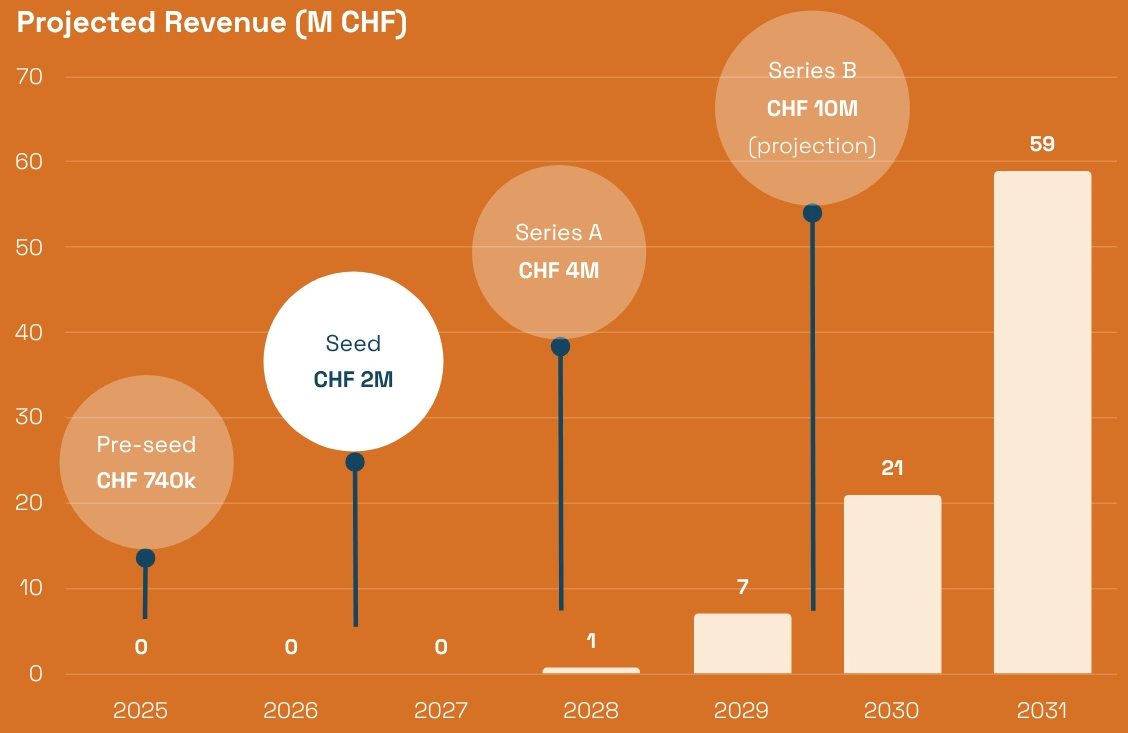
2029
1,000 Patients sensorized

Swiss / UK market entry

2030
EU Market Entry

Value

Join Our Journey



Seed round:

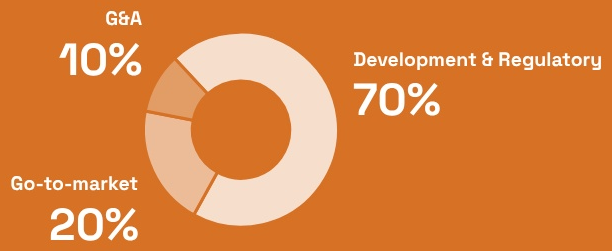
CHF 2M

for regulatory device validation to reach

FIRST IN HUMAN

- Direct Equity Invest
- Closing date: 30 June 2026
- Valuation: Design Freeze Milestone
- Ticket size: CHF 100k - CHF 1M
- Target runway: 18 months

Use of Funds



In 20 years, every orthopedic implant will be SMART, making home the new standard of care.

Let's discuss how BIOS Medical fits your MedTech thesis.
